

We are delighted to tell you that construction of our fiber network in your area has got underway as we anticipate being able to offer you service by Q2 of 2026!

In fact, you may have already seen our construction vehicles around as we scout the route, attach strand and fiber lines to the utility poles and put anchors in the ground to stabilize the network. Some of this work also happens in the right of way. After construction comes the splicing of the cables together, connecting them to one of our power cabinets, and then testing all of it to make sure we bring you the top-quality network that you need and deserve.

Eventually, once we are close to activating our network in your area, you will receive another email inviting you to choose what service package you would like, as well as home/business phone service. Our reliable, high-speed internet, with speeds ranging from 100/100 Mbps to 2 gig/gig, is designed to meet any need or situation you may have, from education, working from home, telehealth, gaming and more. Choosing a service package (each package comes with a free router) will begin the installation process.

If you know you are going to need underground conduit, please check out our website for guidance at nekbroadband.org/underground. As we explain further on our website, because conduit can be expensive, we are not able to cover the cost.

We're proud to be "the internet you need - built by your community." Please call (877-635-3423) or email us (info@nekbroadband.org) with any questions about our services. We look forward to serving you!

The NEK Broadband Team
